landing

flow

open site → draw an area → pick a scene → NDVI / NDWI → compare dates → share link

1 search → many dates of the same place → the one without clouds

results

the box replaces the map view

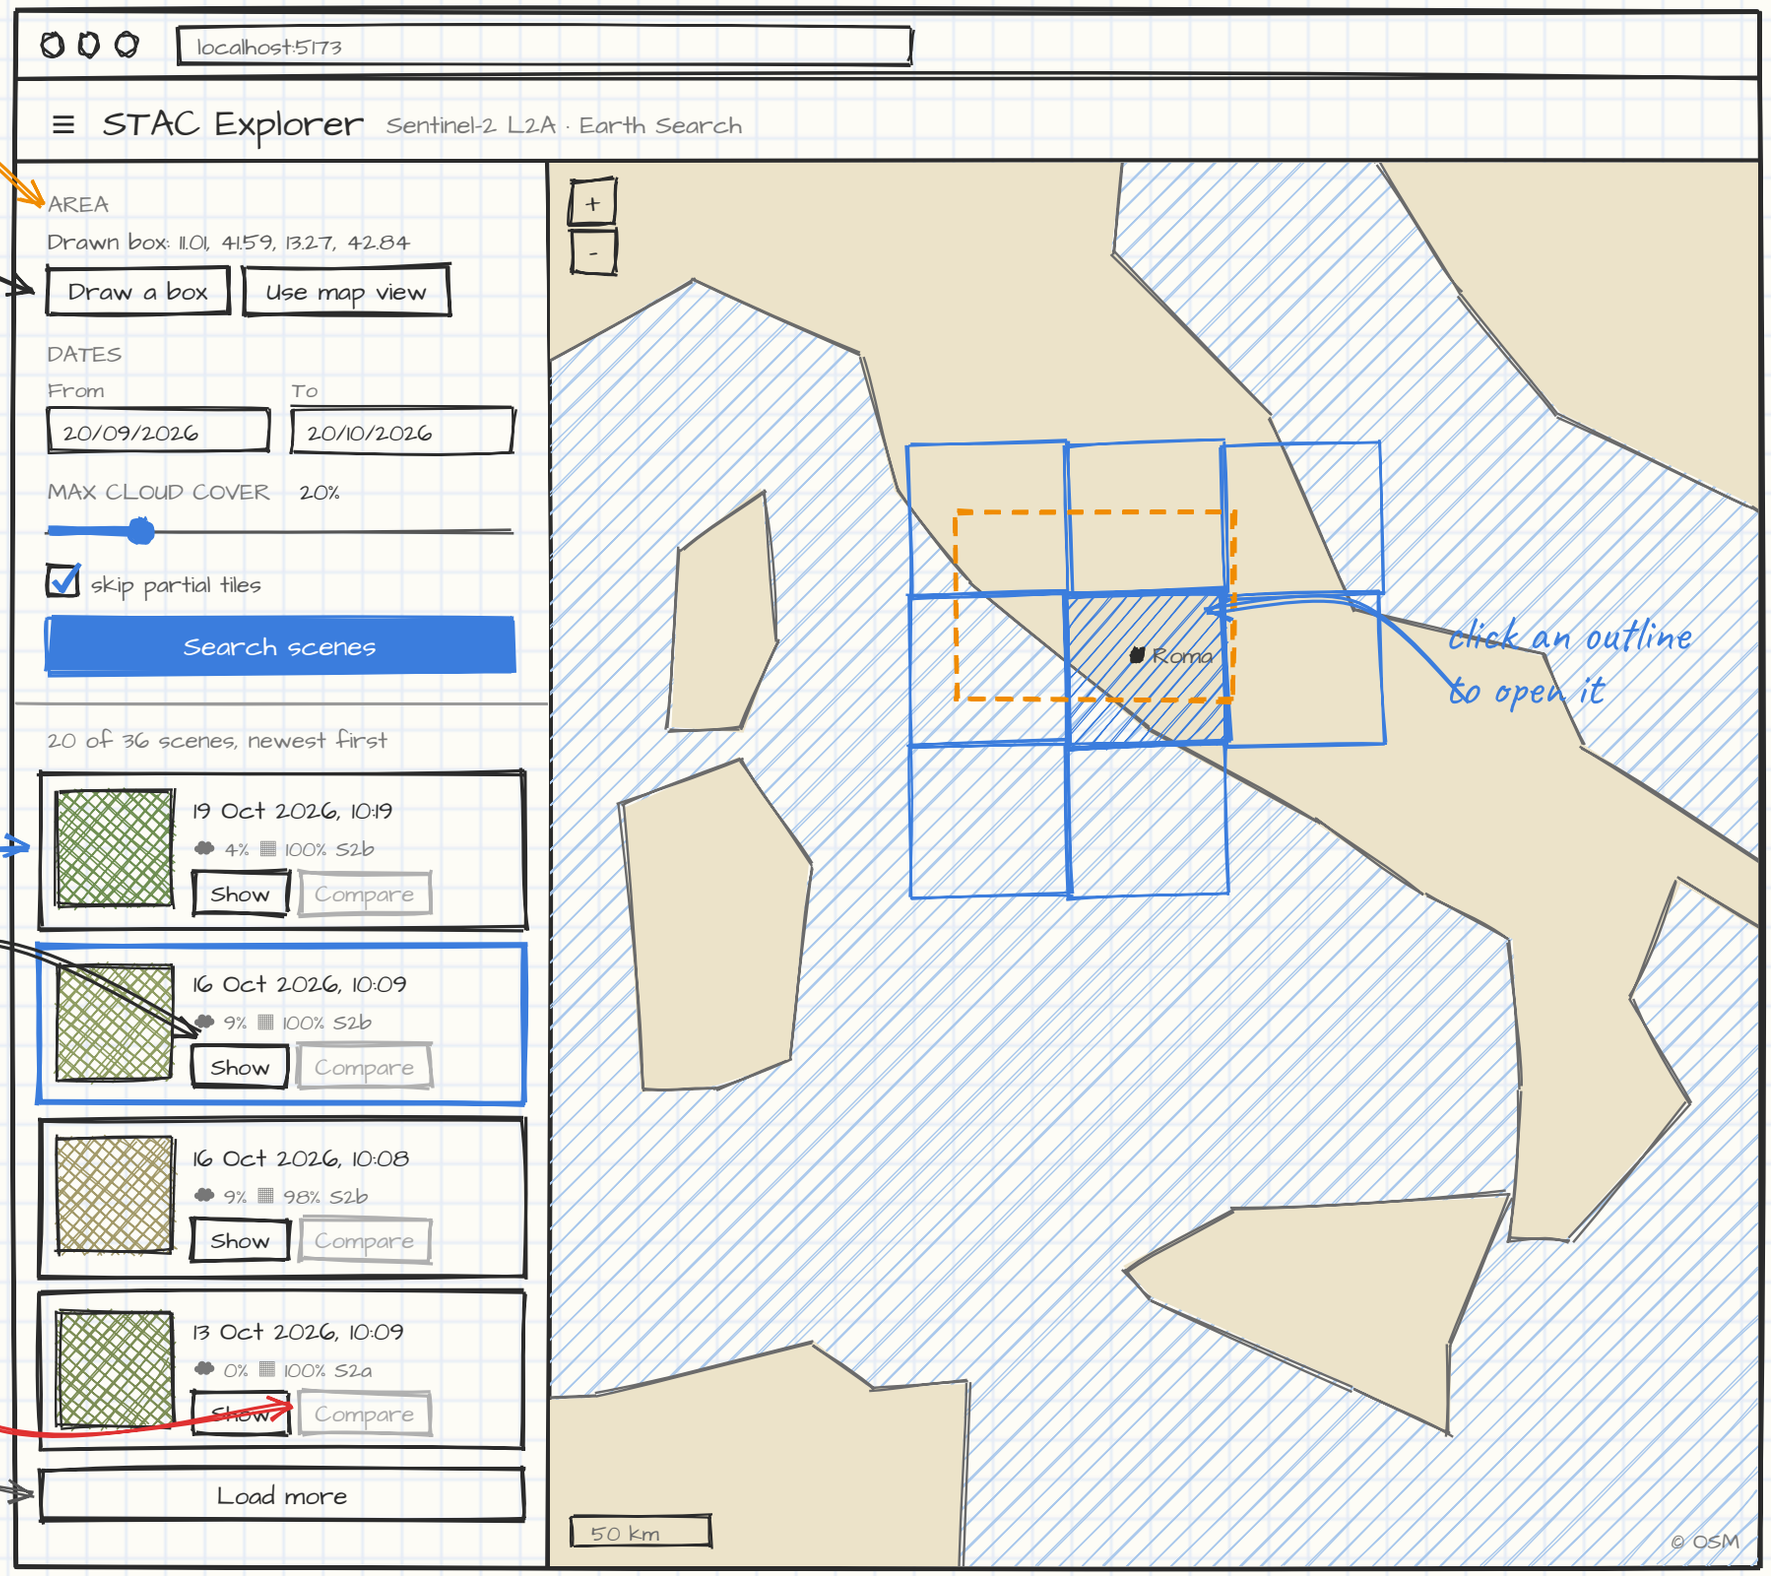

"Draw a box", then drag on the map

hover a card → its outline lights up on the map

☁ clouds ▦ how much of the tile has data

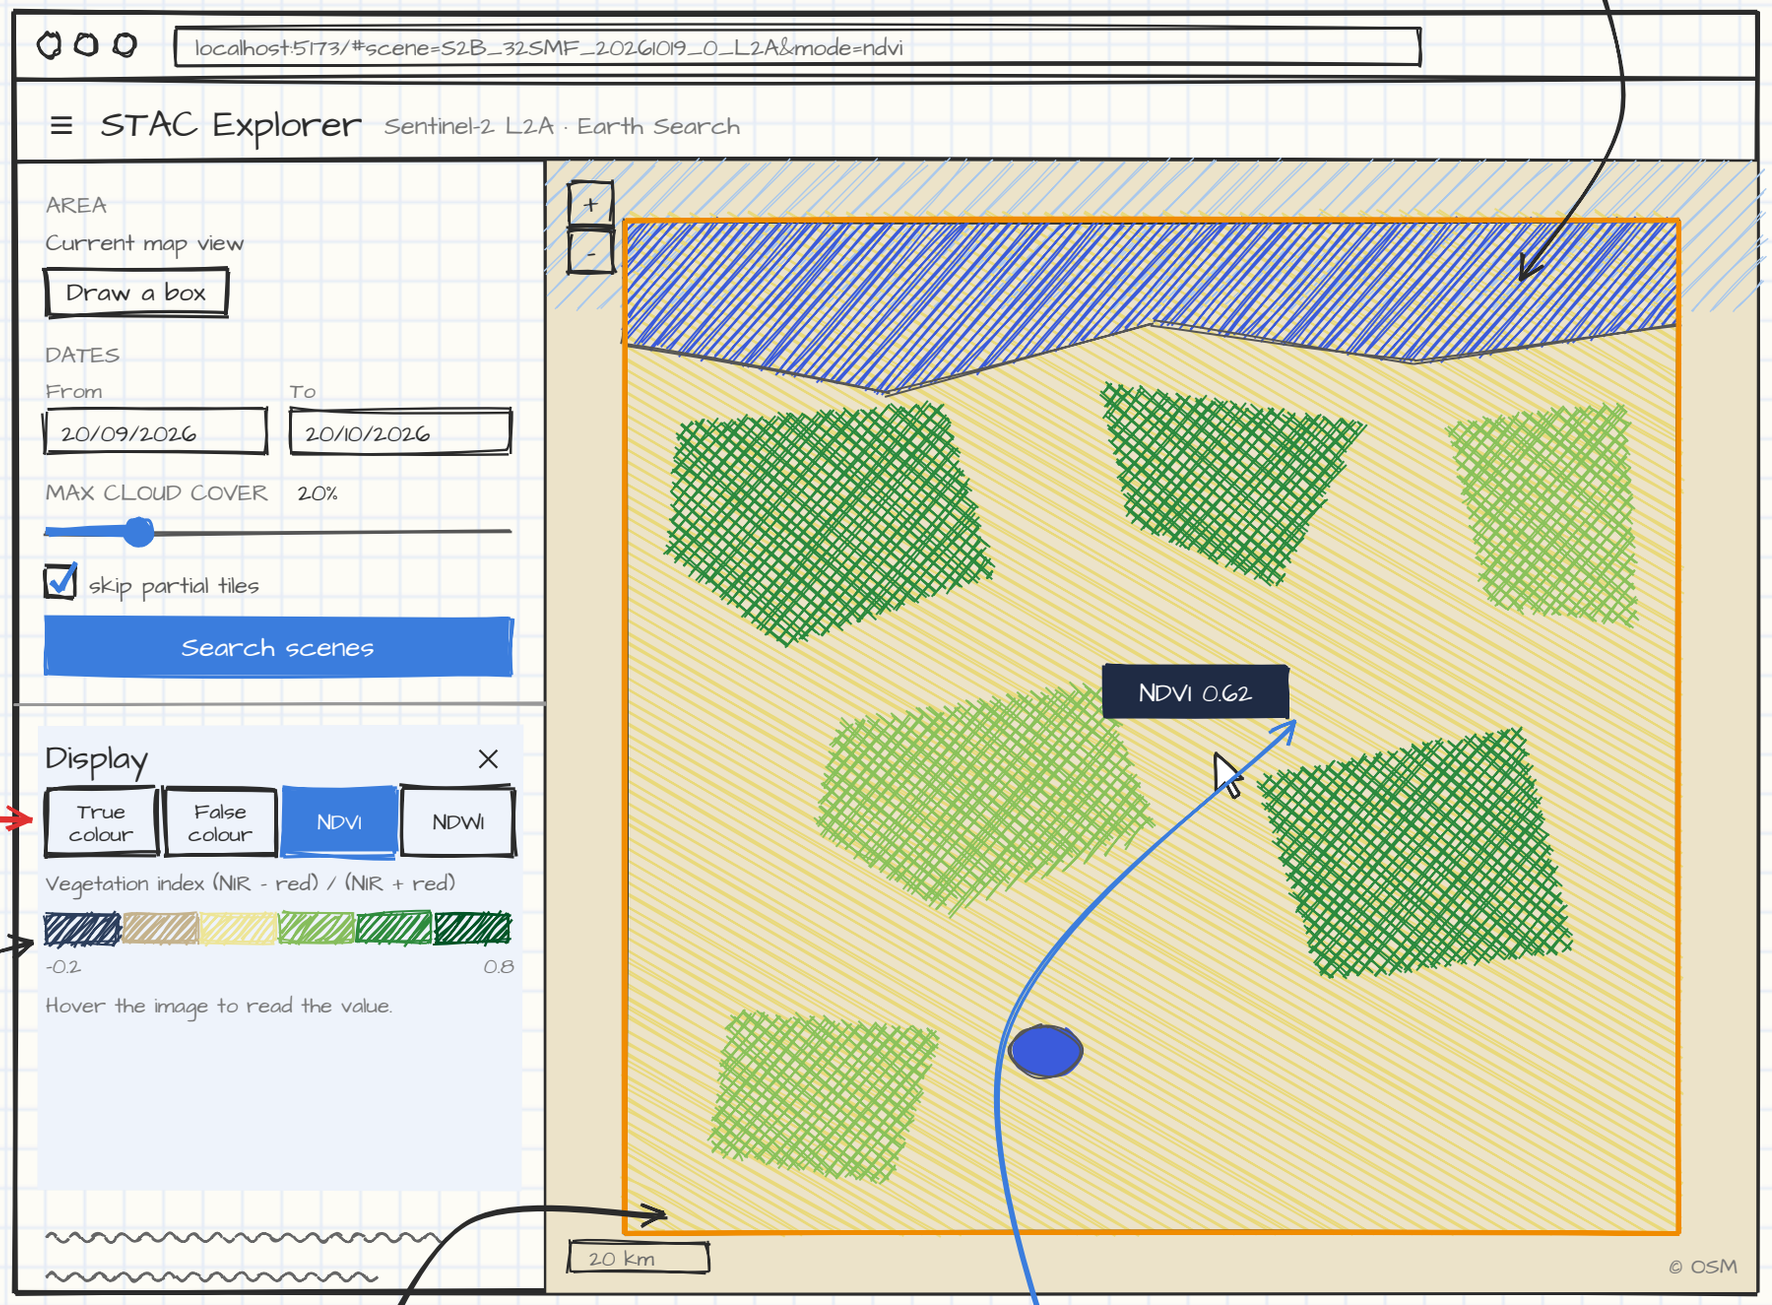

Compare stays off until a scene is shown

"Load more" = the STAC next link

scene + indices

each mode reads only the bands it needs: COG range requests, no tile server

a mode is greyed out if the scene lacks its bands

colours computed on the GPU, same ramp as the legend

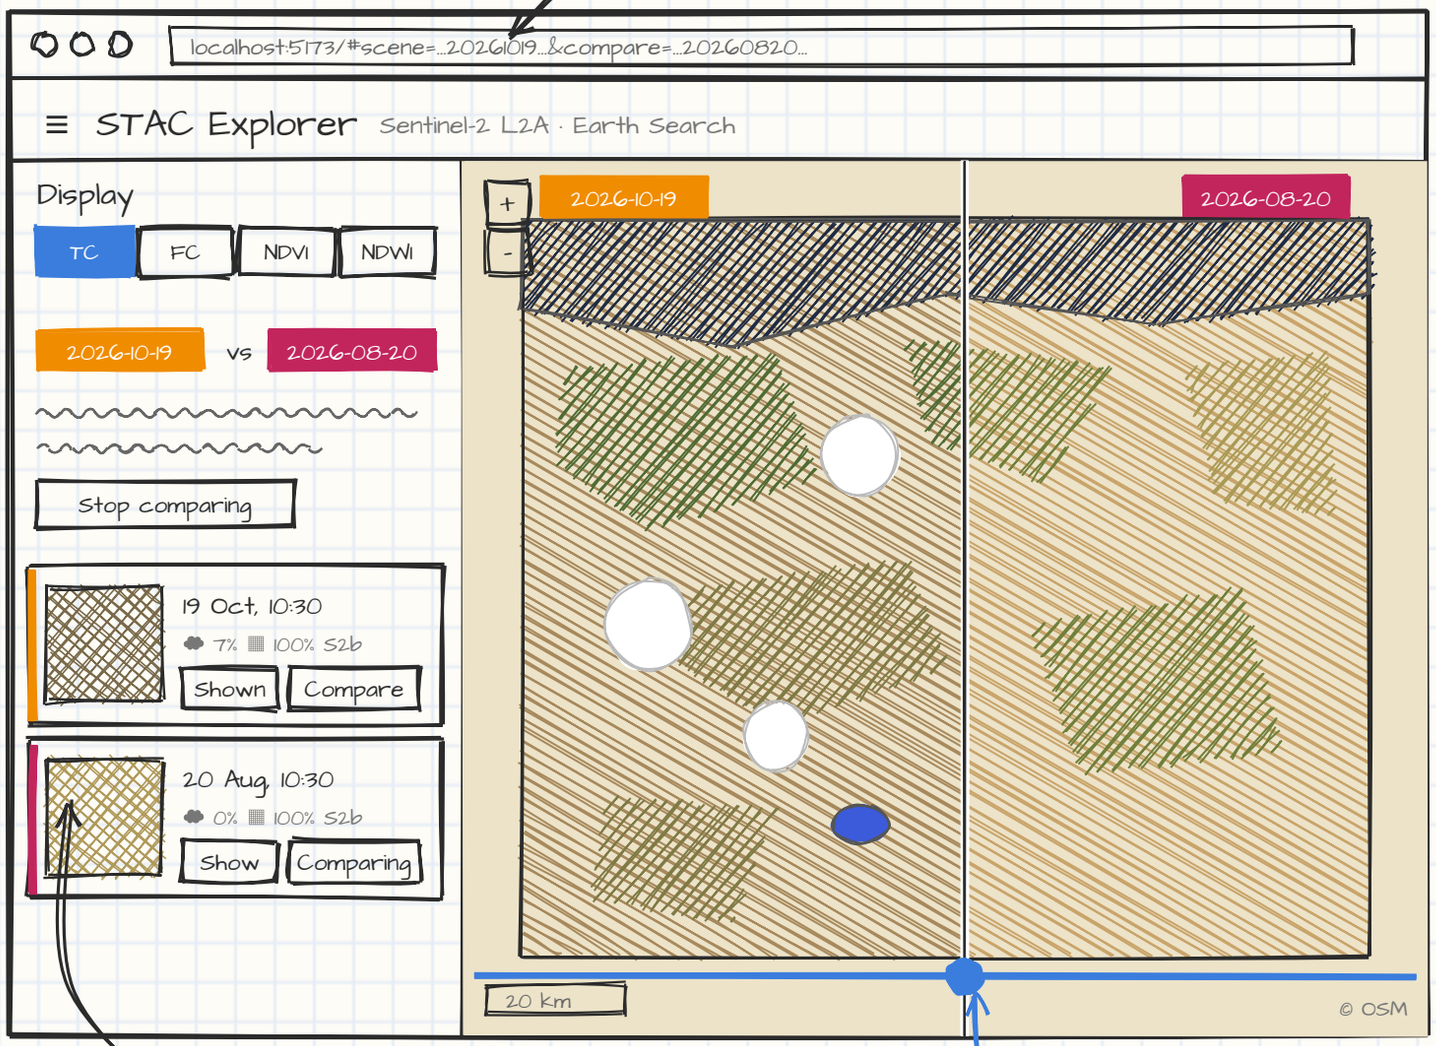

NDVI = (NIR − red) / (NIR + red)
NDWI = (green − NIR) / (green + NIR)

the view zooms to the scene; its outline turns orange

value under the cursor, from the raw pixels

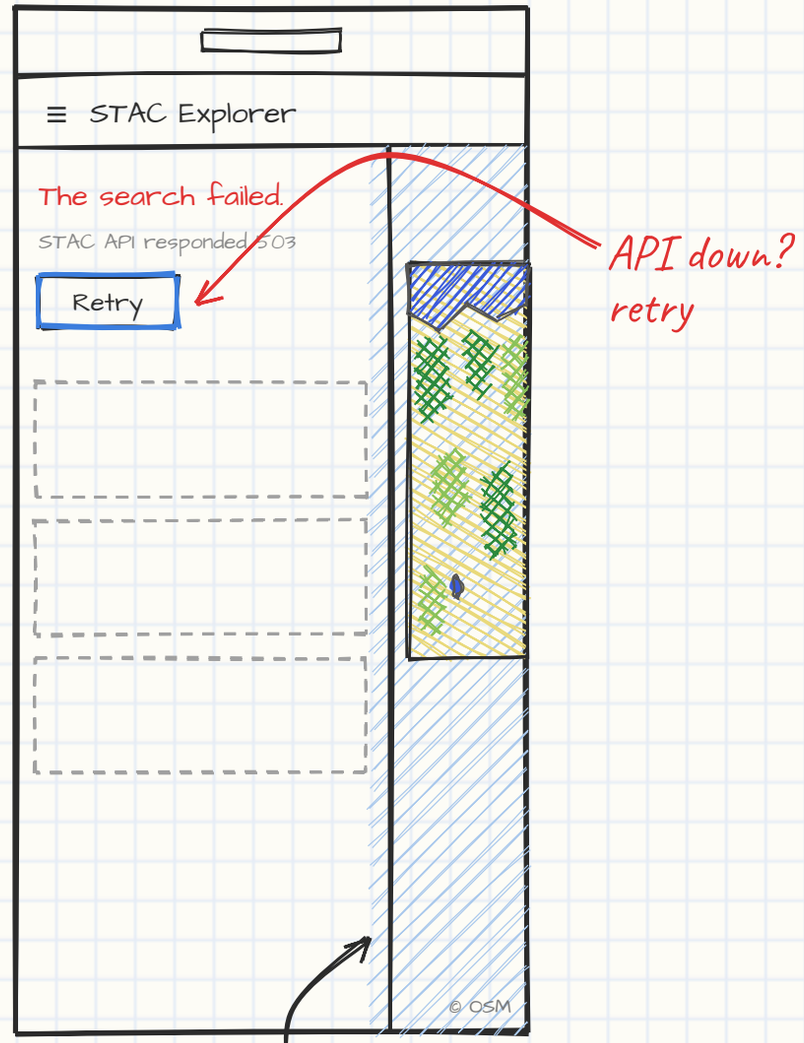

compare + mobile

the link keeps both dates → share it

orange = shown
pink = compared

drag the handle to swipe
between the two dates
